***Synthetic Turf International Completes Tour Edge Golf Testing Facility
Unique Second Floor Test Site Requires Creative Construction***

Batavia, Illinois

February 15, 2007, Jupiter, FL—Synthetic Turf International (“STI”), an industry-leading supplier of premium putting greens and related synthetic surfaces, recently completed installation of an indoor golf equipment testing facility at Tour Edge Golf located in Batavia, Illinois. The project, facilitated in conjunction with STI’s Chicago, Illinois, distributor Synthetic Turf of Illinois, is a major component of Tour Edge’s newly constructed headquarters and will be utilized by Tour Edge sales representatives and local retail customers alike.

The testing site is comprised of a 1,000 square foot synthetic putting green, tee line driving range cages and short-game chipping stations. The green, created with STI’s exclusive NP50 nylon putting surface, is surrounded by a border of NF75 synthetic fringe turf. Constructed on the facility’s mezzanine level, overlooking the golf club production facility, the uniquely designed putting course required innovative construction methods. Fifty tons of base material was required to create the green’s undulations and pitch. The

base material was transported by forklift to the second floor, two wheelbarrow loads at a time.

The hitting bays and chipping stations were created with STI's innovative *EZ Tee* system, a life-like synthetic turf designed specifically for driving range tee lines. *EZ Tee's* innovative composite affords the golfer the option of either hitting off a regulation tee or hitting directly off the synthetic surface. STI's life-like Zoysia SoftLawn product was utilized to create a challenging greenside knoll for uphill and downhill chipping. SoftLawn's resilient surface provides the ideal setting for testing short-game irons while its multi-directional blades provide a life-like appearance.

"This equipment testing site includes all the features of a state-of-the-art short-game practice facility," states Synthetic Turf of Illinois President Doug Steeves. "We've replicated a driving range, created a challenging putting green and a series of target greens. This comprehensive testing facility allows sales reps and customers to test wedges, short irons and putters—in essence every piece of golf equipment needed for every aspect of the game."

Synthetic Turf International has consistently distinguished its people and its synthetic turf solutions as the industry leader in the international marketplace. STI is not merely a reseller or an Internet middleman, the company has a dedicated network of sales professionals and experienced installers throughout the world. This network enables STI to serve clients anywhere in the world. The STI team are specialists at customizing synthetic turf solutions to the specifications of the project, be it golf, sports, residential or commercial landscape-focused.

Founded in 1995, with international headquarters in Jupiter, Florida, STI is recognized as the leading supplier/installer of residential or backyard synthetic putting greens. STI projects range from condominiums and townhouses to single family homes and even large residential estates. The company supplies a host of golf-specific synthetic turf solutions to country clubs, golf clubs, teaching facilities and short game academies. STI is endorsed by David Leadbetter and Jim McLean, two of the industry's most respected instructors. STI provides synthetic surfaces for recreation and sports, including professional, amateur and youth football, soccer, lacrosse, baseball, lawn bowling, bocce and other sports.

STI distributor partners are situated throughout the United States, Canada, Puerto Rico, the West Indies, Germany, France, Spain, England and South Africa. STI welcomes distributor inquiries.
